

## INFERNO OUTDOOR

**Inferno Outdoor is a next-generation outdoor alarm siren, designed to deliver powerful and reliable protection in exposed environments.**

- ✓ **Unbearable sound**
- ✓ **Can be connected to all brands and types of alarm systems.**
- ✓ **Award-winning design, easily integrated into public spaces and private homes.**
- ✓ **Tamper-protected with battery backup.**

The siren is weather-protected in accordance with IP54 and is well suited for installation at doors, gates and other exposed attack points. In addition to functioning as a traditional siren, Inferno Outdoor also creates an effective sound barrier that confronts the intruder directly at the door. The unbearable sound helps stop the intrusion at a very early stage and makes it difficult to continue the attack.

With coverage of up to 35 square meters or up to 5 meters of directional effect per unit, Inferno Outdoor is suitable for everything from single doors to larger protected areas. For more extensive installations, multiple units can be interconnected and work together to cover significantly larger areas with the same high sound level and clear effect.

Inferno Outdoor is developed for professional security installations where reliability, performance and easy scalability are critical. The result is an alarm siren that not only alerts, but actively helps to hinder intrusion and strengthen the overall perimeter protection.

### TECHNICAL DETAILS

|                                  |                        |
|----------------------------------|------------------------|
| <b>Dimensions (L x W x H) mm</b> | 685 x 106 x 40         |
| <b>Battery</b>                   | 9,6 V, 1600 mAh, Ni-MH |
| <b>Operating temperature</b>     | -10 till +60°C         |
| <b>Weight (kg)</b>               | 1,7                    |
